Abstracts

Talc coated rubber thread is a specialized elastomeric product consisting of a rubber core—typically natural or synthetic rubber—that is extruded into a fine, continuous thread and then coated with a layer of talc powder to prevent adhesion between strands, reduce surface tackiness, improve handling, and enhance processability during downstream manufacturing. This product is primarily used in the textile and apparel industries, where it is woven or knitted into fabrics to provide elasticity and shape retention in garments such as lingerie, swimwear, socks, sportswear, medical textiles, and other stretchable apparel. The talc coating serves critical functional purposes, including reducing friction during processing, minimizing static buildup, and ensuring uniform unwinding from bobbins or spools, which is essential for high-speed textile machinery operations.

The global Talc Coated Rubber Thread market size was estimated at USD 285.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.80% during the forecast period.
