Abstracts

A tandem mechanical seal is a specialized sealing system composed of two identical mechanical seals arranged in series within a single housing, designed primarily for handling hazardous, toxic, volatile, or abrasive fluids in industrial applications such as chemical processing, oil and gas, and pharmaceuticals. The primary seal operates under normal conditions to contain the process fluid, while the secondary seal acts as a backup, providing an additional barrier to prevent leakage into the environment in case the primary seal fails. This configuration allows for safe operation, environmental compliance, and continuous monitoring of seal performance through pressure or leakage detection between the two seals, making it critical for high-risk processes where single seal failure could result in significant safety hazards, environmental damage, or operational downtime.

The global Tandem Mechanical Seal market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
