Abstracts

Tank Coating Services refers to a technical service category that provides professional coating applications and related supporting services for various types of storage tanks (such as industrial tanks, chemical tanks, oil tanks, and water treatment tanks). Its core purpose is to protect tanks, extend their service life, and meet the storage requirements of specific media by applying coating materials with specific properties to the interior or exterior of the tanks. Coating technology continues to innovate, with an increasing number of advanced polymer-based coatings being used in tank coating services. These coatings offer excellent durability and chemical resistance. For example, the development of new coating technologies, such as nano-coatings and hybrid solutions, is expected to enhance the performance and extend the service life of tank coatings. Environmental protection requirements are driving material innovation: With increasingly stringent environmental regulations, market demand for environmentally friendly coatings is increasing. Environmentally friendly coating materials, such as low-volatile organic compound (VOC) and solvent-free coatings, will become mainstream. For example, the Belgian tank coating market is moving towards environmentally friendly coating solutions to align with regional sustainable development initiatives. With the continued advancement of industrialization and infrastructure construction, the application areas of tank coating services are expanding. In addition to the traditional chemical and petrochemical industries, demand is also growing in water treatment, new energy, and other fields.

The global Tank Coating Services market size was estimated at USD 719.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
