Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Tantalum and Niobium Materials competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Tantalum and niobium are rare, refractory metals known for their high melting points, corrosion resistance, and exceptional electronic properties. Tantalum is primarily utilized in the electronics industry for the production of capacitors and high-performance resistors, due to its ability to form stable oxide layers that make it ideal for miniaturized electronic components. Niobium, on the other hand, is commonly alloyed with steel to improve strength, weldability, and resistance to wear and corrosion, making it essential in the construction, energy, and aerospace sectors. Both metals are also used in chemical processing, medical implants, superalloys, and advanced catalyst systems, reflecting their broad applicability in critical industrial and technological domains.
