Abstracts

A tape cutter is a convenient tool for cutting tape quickly and accurately. One end of the tape cutter is usually equipped with a device for placing the tape, and the other end is equipped with a blade or sawtooth for cutting the tape. These machines have a variety of designs. Some are small and easy to carry and move, such as the common tape holders used in offices or homes; some are fixed on the table and have complex functions for controlling the feeding and cutting process. They are ergonomically designed and more convenient and comfortable to use. The tape cutter controls the feeding and cutting process of the tape mechanically or electronically. For example, some tape cutters use laser cutting technology, which uses the high coherence, high intensity and high directionality of the laser to irradiate the light on the tape, so that the surface of the tape is subjected to strong heat energy, causing the temperature to rise sharply, forming rapid melting or vaporization, thereby completing the cutting. Other tape cutters may use mechanical blades for cutting, and achieve precise cutting of the tape by adjusting the position and angle of the blade and controlling the feeding speed.

The global Tape Cutter market size was estimated at USD 1286.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.90% during the forecast period.
