## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Tapes for Semiconductor Manufacturing Process competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Tapes for Semiconductor Manufacturing Process refer to a range of high-performance adhesive tapes used throughout various stages of wafer fabrication, assembly, and testing in semiconductor production. These functional tapes serve purposes such as temporary bonding, surface protection, wafer thinning, dicing, mounting, and encapsulation. Based on the application stage, the main product types include back grinding tapes, dicing tapes, wafer mounting tapes, surface protection films, UV-release tapes, and encapsulation tapes. These tapes are typically composed of a base material (e.g., PET, PE, PI), a pressure-sensitive adhesive layer (e.g., acrylic, rubber, silicone), and may feature functional coatings such as anti-static, UV-curable, or heat-resistant layers. As semiconductor devices evolve toward higher integration, smaller node sizes, and ultra-thin wafer structures, the demand for tapes with high cleanliness, minimal residue, excellent peel performance, and process compatibility is rapidly increasing. In terms of consumption side, China Taiwan is currently the world's largest consumer market, accounting for 34.0% of the market share in 2023, followed by mainland China and North America, accounting for 27.4% and 9.27% respectively. Southeast Asia is expected to grow fastest in the next few years, with a CAGR of approximately 10.6% during 2024-2030. From the production side, Japan is the largest production area, and the key manufacturers are mainly headquartered in Japan. In 2023, Japan accounted for approximately 83% of the production share. It is expected that in the next few years, the production of wafer tape in the Chinese market will maintain the fastest growth rate, and the share is expected to reach 9.41% in 2030. In

terms of product type, UV wafer tape has a higher proportion, with a share of 62.5% in 2023 and an estimated share of 64% in 2030. From the application point of view, the wafer cutting process accounts for a high proportion, with a share of 54.95% in 2023. It is expected that the wafer grinding process will grow faster in the next few years, and the share will increase from 45.05% in 2023 to 46.01% in 2030. From the perspective of manufacturers, the key manufacturers of semiconductor wafer tapes worldwide mainly include Mitsui Chemicals, LINTEC Corporation, Furukawa Electric, Denka, Nitto Denko Corporation, Maxell Siontec and Sekisui Chemical. In 2023, the top five manufacturers in the world accounted for about 82.5% of the market share. Chinese local manufacturers of wafer tapes are currently mainly in the verification and small batch stages. Representative companies include Shanghai Guke Adhesive Tape Technology, Plusco Tech, Taicang Zhanxin Adhesive Material, Cybrid Technologies, ZZSM, BYE POLYMER MATERIAL, ZHONGSHAN CROWN ADHESIVE PRODUCTS, Yantai Darbond Technology and Sunliky New Material Technology. It is expected that in the next few years, Chinese local companies will gradually grow and occupy a higher share in the Chinese market.

The global Tapes for Semiconductor Manufacturing Process market size was estimated at USD 927.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.90% during the forecast period.
