Abstracts

Based on mass spectrometry analysis technology, combined with prior bioinformatics analysis, the Targeted Proteomics Service utilizes techniques such as Multiple Reaction Monitoring (MRM) or Selected Reaction Monitoring (SRM) to accurately target specific peptides and ion signals for quantitative analysis. Unlike non-targeted proteomics, this approach selectively chooses ions for the collection of mass spectrometry data, enabling the analysis of numerous samples with enhanced accuracy, sensitivity, and reproducibility. Targeted proteomics is applicable to a range of studies including post-translational modifications, protein conformations, protein-protein interactions, dynamics, and the systemic investigation of metabolic and signaling pathways.

The global Targeted Proteomics Service market size was estimated at USD 1524.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.30% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Targeted Proteomics Service market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
