Report Overview

Taxifolin, also known as dihydroquercetin, is a naturally occurring flavonoid found in plants such as Siberian larch, onions, and milk thistle, known for its potent antioxidant, anti-inflammatory, and free radical-scavenging properties. It is widely used in the pharmaceutical, nutraceutical, and cosmetic industries due to its health benefits, including cardiovascular protection, immune system support, and potential anti-cancer effects. The global market for taxifolin is expanding, driven by increasing demand for natural and plant-based bioactive compounds, rising health consciousness among consumers, and growing applications in functional foods, dietary supplements, and skincare products. Key regions such as North America, Europe, and Asia-Pacific are witnessing significant growth, fueled by advancements in extraction technologies and regulatory support for natural ingredients. However, challenges such as limited raw material availability, high production costs, and stringent quality standards may restrain market expansion. Leading players are focusing on sustainable sourcing, product innovation, and strategic partnerships to strengthen their market position. The increasing popularity of clean-label and organic products further boosts taxifolin's adoption, making it a promising ingredient in the global nutraceutical and pharmaceutical sectors.

The global Taxifolin market size was estimated at USD 189.26 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.61% during the forecast period.
