The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on TCT Cell Examination Preservation Solution competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. TCT cell preservation solution is a specialized preservation and fixation solution for liquid-based thin-layer cytology (TCT) testing. It can immediately fix exfoliated cervical cells after sampling, maintaining their morphological structure, preventing cell rupture, denaturation, or degradation, and inhibiting microbial growth. This preservation solution ensures that cells maintain good staining and detection quality during transportation and storage, making it one of the key consumables in cervical cancer screening sample preparation. In 2024, sales reached 140 million units, with an average price of \$5, a single-line production capacity of 15 million units, and a gross profit margin of 45%. With the comprehensive advancement of global cervical cancer screening policies, TCT liquid-based cytology technology has become a standard screening method in public health systems worldwide, leading to a continuous increase in demand for TCT preservation solutions. Populous countries like China and India are accelerating the construction of grassroots maternal and child screening networks, further expanding the market for preservation solutions. Simultaneously, the rapid development of health checkup centers and third-party medical testing institutions has expanded TCT preservation solutions from "hospital-specific products" to "high-frequency consumables for multiple scenarios," resulting in a stable upward trend in market size. In the competitive structure, differentiation advantages are shifting from price competition to technology and quality competition. Low-toxicity, formaldehyde-free preservation solutions, nucleic acid-friendly preservation solutions compatible with HPV testing, and high-stability formulations compatible with automated slide preparation systems are experiencing the fastest growth, with demand growth rates significantly

higher than traditional products. Furthermore, with the widespread adoption of fully automated slide preparation machines and AI cell recognition systems, the requirements for standardization, consistency, and automation compatibility of preservation solutions are continuously increasing. High-end formulations, lyophilized preservation solutions, and intelligent testing solutions will become key growth drivers in the future market.

The global TCT Cell Examination Preservation Solution market size was estimated at USD 700.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.00% during the forecast period.
