Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on TCT Examination of Cell Preservation Fluid competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. TCT cell preservation solution is a specialized preservation medium for liquid-based thin-layer cytology (TCT) cervical screening. It is used to immediately fix exfoliated cervical cells after sampling, maintaining their morphological structure and preventing autolysis, fragmentation, or bacterial contamination, while preserving the readability of cells in subsequent slide preparation, staining, and microscopic examination. This preservation solution typically contains fixatives, buffer systems, and preservatives, allowing for stable sample preservation for weeks or even longer. It is a key reagent for ensuring the quality and diagnostic accuracy of TCT testing. In 2024, sales reached 140 million units, with an average price of \$5, a single-line production capacity of 15 million units, and a gross profit margin of 45%. With increasing global awareness of cervical cancer screening and the widespread adoption of ThinPrep Cytology Tests (TCT) in medical institutions, the TCT cell preservation solution market is experiencing sustained expansion. National public health programs, strengthened maternal and child health systems, and the growth in the number of health check-up centers are driving a continuous increase in demand for TCT sample processing. Simultaneously, the high incidence of cervical cancer in low- and middle-income regions is accelerating the penetration of both economical and long-lasting preservation products, resulting in a dual-track growth pattern of "high-end stable solutions + general ready-to-use solutions." Looking ahead, the widespread adoption of digital pathology systems and automated slide preparation systems in hospitals will further boost demand for high-end preservation solutions with higher stability, low toxicity formulations, and compatibility with automated platforms. Comprehensive preservation solutions with

better cell morphology preservation capabilities and the ability to support HPV analysis or molecular detection will command higher premiums. Furthermore, stricter international regulations and higher production standards will accelerate industry consolidation, creating greater market opportunities for companies with strong R&D capabilities and quality systems.

The global TCT Examination of Cell Preservation Fluid market size was estimated at USD 700.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.00% during the forecast period.
