## Abstracts

The chemical formula for TDI is  $\text{CH}_3\text{C}_6\text{H}_3(\text{NCO})_2$ . TDI is often marketed as TDI 80/20. TDI 80-20 is a mixture blend of 80% 2,4-toluene diisocyanate and 20% 2,6-toluene diisocyanate. The clear to pale yellow liquid organic compound is toxic, has a sharp odor, and is highly reactive. It is used in the manufacture of polyurethane flexible foam (slab/molding) and non-foam urethanes. The increasing demand for TDI in end-use applications has resulted in an increasing demand for flexible PU foams, but it sacrifices excellent properties such as light weight, strength, comfort and flexibility. Rising number of furniture companies in Asia Pacific owing to the presence of furniture manufacturers and government assistance, increasing demand for pre-assembled furniture will fuel the demand for TDI. Likewise, rising demand for polyurethanes in various assembly industries is expected to drive the growth of the toluene diisocyanate market. Increasing use of polyurethane in furniture, bedding, and sofa manufacturing is another key factor expanding the toluene diisocyanate market.

The global TDI 80-20 market size was estimated at USD 1698.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.
