Report Overview

Tecar equipment is a treatment equipment for Tecar therapy. Tecar therapy, also known as capacitive-resistive energy transfer (CRET) therapy, is a type of physical therapy that uses high-frequency electromagnetic waves to stimulate tissue healing and reduce pain. The therapy involves using a device that emits electromagnetic waves that are directed to the affected area of the body through hand-held electrodes or pads placed directly on the skin. The electrical current generated by the device is designed to penetrate deep into the tissue, where it stimulates blood flow, improves circulation, and promotes cell repair and regeneration. Tecar therapy is commonly used to treat a variety of conditions, including chronic pain, sports injuries, joint problems, and muscle strains.
