Abstracts

Technical grade deltamethrin is a synthetic pyrethroid insecticide belonging to the class of non-systemic, broad-spectrum pest control agents derived from natural pyrethrins, characterized by its high insecticidal potency, photostability, and low mammalian toxicity. It is produced and sold in a concentrated, unformulated state (typically 98%100% purity) intended for further processing into end-use products such as emulsifiable concentrates, wettable powders, or ultra-low volume formulations. Its primary function is to control a wide range of insect pests in agricultural, public health, and veterinary applications by targeting the nervous systems of insects through sodium channel modulation, leading to rapid paralysis and death. The "technical grade" designation indicates it has not been diluted or combined with other ingredients (such as solvents, emulsifiers, or synergists) required for practical field application, making it a key intermediate product in the agrochemical supply chain.

The global Technical Grade Deltamethrin market size was estimated at USD 102.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.25% during the forecast period.
