Abstracts

Technical grade glass powder is a finely ground material produced from recycled or waste glass, processed to specific particle sizes and chemical compositions to meet industrial requirements; it is characterized by its amorphous structure, chemical inertness, and controlled purity levels, making it distinct from decorative or artistic glass powders due to its functional properties such as high thermal stability, low thermal expansion, and tailored reactivity, which are optimized for applications including abrasives, fillers in composites, construction materials, surface treatments, and reflective coatings where performance, consistency, and cost-effectiveness are prioritized over aesthetic qualities.

The global Technical Grade Glass Powder market size was estimated at USD 148.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
