Abstracts

Technical support outsourcing provides technical support services across various ‘business to business’ and ‘business to customer’ segments. Rapidly changing technology has challenged tech-savvy customers in coping with rising technical inventions. IT support teams are striving hard to cater the demands from the customers with high expectations for quick resolution. Further, IT companies lay more emphasis on customer-centric services rather than cost reduction approach. Outsourced IT and technical support services offer SMEs a cost effective platform, thereby limiting their budgets. Technical support outsourcing primarily caters customers concerned with the technical aspects of the product or service. Offshore technical support cannot be treated as a peripheral process, since it requires a dedicated and experienced team to work around the clock and deliver higher value to the customers.The key factor challenging technical support outsourcing services is the loss of quality control on company’s technical support service the failure of which might affect the reputation of the famous brands. Furthermore, most of the companies feel that outsourcing technical support puts a degree of distance between business and the customers. Moreover, data breaching activities such as exposing confidential customer data base may lead to heavy business loss of the client who has outsourced technical support to the third parties.

The global Technical Support Outsourcing market size was estimated at USD 49590.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Technical Support Outsourcing market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights. It examines market size, competitive
