### Report Overview

Polytetrafluoroethylene (PTFE) is a synthetic fluoropolymer and is commonly known as Teflon. It has numerous applications.

A capacitor is a passive electronic component capable of storing charge with a certain voltage level across two conducting plates, separated by a dielectric substance. Teflon capacitors are capacitors where Teflon or Polytetrafluoroethylene are used as a dielectric material.

Teflon capacitors have very low dielectric absorption, low dissipation factor, very high operating temperature of +170C, low-temperature drift, negligible moisture absorption, and have good stability.

Axial and radial Teflon capacitor are the two types of Teflon capacitors used in various applications such as consumer electronics, power and utilities, aerospace, telecommunication, and in the automotive sector.
