Abstracts

Telco Cloud refers to the transformation of traditional telecommunications infrastructure into a cloud-based environment that leverages virtualization, automation, and scalable cloud technologies. It enables telecom operators to manage and deliver their services more efficiently and flexibly by moving away from traditional, hardware-based networks to virtualized network functions (VNFs) and cloud-native solutions. Telco Cloud combines technologies such as network functions virtualization (NFV), software-defined networking (SDN), and cloud computing to deliver scalable, agile, and cost-effective telecom services. Orchestration Services within the Telco Cloud context involve the automation and management of network services and resources through orchestration software. This software automates processes like service provisioning, configuration, monitoring, and scaling of network functions, ensuring that services are delivered with optimal performance and efficiency. Orchestration is crucial for managing the complexity of virtualized networks and automating the lifecycle of network services.
