Abstracts

Telecentric lenses, as a uniquely designed optical element, are designed to correct the parallax problems that may occur when imaging with traditional lenses. The unique feature is that they can maintain a constant image magnification within a wide range of object distances, and are not affected by changes in the distance between the object and the lens. This extraordinary feature makes telecentric lenses unparalleled in the field of measurement and inspection that pursues extreme precision. In the semiconductor manufacturing industry, accurate measurement of micro-nano structures such as chips and pins is crucial. With its excellent high resolution and near-zero distortion imaging capabilities, telecentric lenses provide a solid guarantee for accurate measurement of these tiny sizes. Telecentric lenses not only ensure the accuracy of measurement data, but also further improve the stability of measurement results, laying a solid foundation for the high quality requirements of semiconductor manufacturing.

The global Telecentric Lenses for Semiconductor Equipment market size was estimated at USD 69.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
