Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Telechelic Polymers competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Telechelic Polymers production reached approximately 95,000 metric tons, with an average global market price of around US\$ 12,000 per metric ton. Telechelic polymers are a class of macromolecules characterized by reactive functional groups located at both ends of their polymer chains. These end-groups—such as hydroxyl (–OH), carboxyl (–COOH), amine (–NH₂), or isocyanate (–NCO)—enable further chemical reactions, such as cross-linking, chain extension, or grafting with other polymers or substrates. The central polymer chain, often referred to as the "midblock," can be of various compositions, including polyether, polyester, or polyolefin. Due to their dual-reactivity, telechelic polymers are widely used as precursors in the synthesis of thermoplastic elastomers, block copolymers, polyurethanes, and advanced materials for coatings, adhesives, sealants, and biomedical applications. The key market drivers for telechelic polymers stem from their versatility in forming high-performance materials through end-group reactivity, which enables the production of block copolymers, thermoplastic elastomers, and advanced adhesives and sealants. Growing demand in industries such as automotive, aerospace, electronics, and construction is propelling their use in durable coatings, flexible foams, and reactive adhesives. Additionally, their role in biomedical applications—such as drug delivery systems and tissue engineering—fuels further innovation. The market is also driven by the rise of customized polymer architectures for additive manufacturing and sustainable materials, supported by advancements in controlled polymerization techniques like RAFT and ATRP.

The global Telechelic Polymers market size was estimated at USD 1147.0 million in

2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
