Report Overview

Telescopic doors are a type of sliding door system designed to maximize space efficiency by stacking multiple panels that slide and fold into a compact configuration when opened. These doors consist of interconnected panels that glide along tracks, allowing for wider openings without requiring the clearance typically needed for traditional sliding or swing doors. They are commonly used in commercial and residential settings, particularly in areas with limited space, such as storefronts, patios, and interior room dividers. The telescopic mechanism ensures smooth operation while providing a modern, sleek aesthetic. Materials range from aluminum and glass to wood composites, offering durability, insulation, and customization options. Their growing popularity is driven by urbanization, space constraints, and increasing demand for flexible, high-performance door solutions.
