## Abstracts

A telescopic drive shaft is a mechanical transmission component specially designed to transmit power and torque. Its notable feature is that it can be adjusted in length to adapt to dynamic changes in the distance or angle between the connected parts. It is widely used in agricultural machinery, industrial equipment and other fields, and is an indispensable part of modern mechanical systems. Telescopic drive shafts are usually made of high-strength steel tubes or lightweight alloys, with spline connections or sleeve structures inside, so that it can be extended or shortened as needed while transmitting torque. Some models are also equipped with universal joints (such as cross universal joints or constant velocity universal joints) to cope with changes in the axis angle and ensure the smoothness and continuity of power transmission.

The global Telescopic Drive Shaft market size was estimated at USD 878.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
