## Abstracts

Telescopic extraction arms are specialized industrial ventilation systems designed to capture and remove hazardous airborne contaminants such as fumes, dust, smoke, and vapors at or near their source. These systems consist of an articulated, extendable arm—typically made of lightweight yet durable materials like aluminum or steel—that can be easily positioned and locked into place to maximize extraction efficiency. Equipped with an external suction unit, flexible ducting, and often featuring adjustable hoods or nozzles, telescopic extraction arms are engineered for versatility, allowing operators to adapt the extraction point to various workspace configurations. They are widely used in settings such as welding, chemical processing, laboratories, and manufacturing to ensure compliance with occupational health and safety standards while maintaining air quality.

The global Telescopic Extraction Arms market size was estimated at USD 325.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
