Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Tembotrione Technical competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Tembotrione Technical is a next-generation triketone herbicide developed in 2007 for cornfields, classified as an HPPD inhibitor and representing the third generation of foliar-applied herbicides. Its activity is significantly higher than that of traditional herbicides such as sulcotrione and mesotrione, offering a broad spectrum of weed control, long effective duration, and high crop safety. Tembotrione is primarily used in corn, effectively controlling annual grasses and broadleaf weeds, and also demonstrates efficacy against certain resistant weed species. Its superior rainfastness and extended application window provide a competitive advantage over similar products. Currently, tembotrione is registered and marketed in the United States, Europe, Brazil, and multiple countries in Latin America, achieving strong market performance and becoming a key choice for high-efficiency weed management in corn cultivation. In 2024, the global average price of Tembotrione Technical was approximately USD 88 per kilogram, with total sales reaching around 3,250 tons.

The global Tembotrione Technical market size was estimated at USD 286.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
