Abstracts

Temperature-controlled transportation solutions are systematic logistics services that achieve temperature control, visibility, and traceability throughout the entire transportation process by integrating technologies such as temperature monitoring, refrigeration/heating control, insulated packaging, and data tracking. This solution encompasses components such as cold chain vehicle systems, insulated boxes, temperature sensors, intelligent control terminals, and a cloud-based management platform to ensure the quality and safety of temperature-sensitive products such as pharmaceuticals, biological products, food, and chemical raw materials during storage and transportation. Its core technologies include active refrigeration (compressor refrigeration, semiconductor refrigeration), passive insulation (phase change materials, multi-layer insulation films), and remote temperature control data monitoring. Temperature-controlled transportation solutions are not only used in the pharmaceutical cold chain and fresh food e-commerce sectors, but also widely serve vaccine distribution, precision instruments, and high-end chemical transportation, forming a crucial support link in modern intelligent logistics systems.
