Report Overview

Temperature-regulating fabric is an advanced textile designed to maintain a consistent and comfortable temperature for the wearer by actively managing heat and moisture. This fabric typically incorporates phase change materials (PCMs) or other innovative technologies that absorb, store, and release heat as needed, responding dynamically to changes in body temperature and the external environment. When the body becomes too warm, the fabric absorbs excess heat and stores it; when the temperature drops, the stored heat is released to keep the wearer warm. This regulation process helps to reduce overheating and sweating, enhancing comfort in a wide range of conditions. Temperature-regulating fabrics are used in various applications, including athletic wear, bedding, outdoor gear, and medical textiles, offering benefits such as improved thermal comfort and energy efficiency.
