Abstracts

Tempered glass anti-peeping film is a special type of tempered film. It not only has the function of ordinary tempered film to protect the screen from scratches, impacts and other damage, but also achieves the anti-peeping effect through special optical technology. This film can effectively limit the viewing angle of the screen, so that the screen content can only be clearly seen at a certain angle (usually the front), while at other angles it is blurred or black, thereby protecting the user's privacy information from being peeped. The anti-peeping film adopts micro-louver optical technology or similar optical principles. By adjusting the path and angle of light passing through the film, the screen content is visible at a certain angle, and becomes blurred or invisible at other angles. This technology can effectively prevent others from peeping at the screen content without the user's knowledge. Tempered glass anti-peeping film is widely used on LCD screens of electronic products such as mobile phones and tablets. As people pay more and more attention to privacy protection, the market demand for this film is also increasing. In the market, users can find privacy film products of various brands, specifications and prices to meet different needs. With the development of science and technology and the enhancement of people's awareness of privacy protection, anti-peeping window film, as a new type of privacy protection material, is gradually gaining favor in the market. Anti-peeping window film adopts micro-louver optical technology to achieve different visual blocking effects by adjusting the angle, effectively preventing others from peeping and protecting the privacy of users. Anti-peeping window film is not only suitable for computer screens, but also can be widely used in electronic devices such as mobile phones and tablets, as well as glass windows and other scenes, meeting the privacy protection needs in different fields. The application field of anti-peeping window film is constantly expanding. In addition to traditional computer screens, anti-peeping window film can also be applied to mobile devices such as mobile phones and tablets. When these devices are used in public places, the use of anti-

peeping window film can effectively prevent others from peeping and protect personal privacy. In addition, in the field of glass windows, anti-peeping window film also has broad application prospects. For example, anti-peeping window film is affixed to glass windows in offices, conference rooms and other places, which can effectively prevent outsiders from peeping into the internal situation and protect commercial secrets and privacy. In summary, the tempered glass anti-peeping film market is in a rapid development stage, and in the future, the anti-peeping window film market will usher in a broader development prospect.

The global Tempered Glass Anti-peeping Film market size was estimated at USD 359.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
