## Abstracts

Solar Glass for solar cells is generally used as an encapsulation sheet for solar modules to protect solar cells. After the solar cell is installed in the solar panel, the conversion efficiency will be reduced because the encapsulating glass absorbs and reflects sunlight. Therefore, in order to minimize the reflection and absorption of sunlight so that more sunlight can pass through the protective glass and hit the solar cell, the quality of the encapsulation glass is very important. Because of this unique feature, as the global use of solar energy continues to rise and the installation of solar modules and panels increases, there is an even greater demand for specialized, high-quality and high-transparency solar glass products. The global Solar Glass market size is expected to reach US\$ 14880 million by 2029, growing at a CAGR of 13.9% from 2023 to 2029. The market is mainly driven by the significant applications of Solar Glass in various end use industries. The expanding demands from the Single Glass Module and Dual Glass Module, are propelling Solar Glass market. 3.2mm, one of the segments analysed in this report, is projected to record % CAGR and reach US\$ million by the end of the analysis period. Growth in the 2.5mm segment is estimated at % CAGR for the next seven-year period. Global key players of solar glass include Xinyi Solar, FLAT and CNBM. The top three players hold a share about 71%. The global origins are mainly located in Europe, China, India and South Korea, with China being the largest production region, holding more than 90% of the market share. In terms of product, 3.2mm is the largest segment, with a share about 49%. And in terms of application, the largest application is dual glass module, with a share about 51%.

The global Tempered Solar Glass market size was estimated at USD 7666.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 13.90% during the forecast period.
