Abstracts

A temporary roofing system refers to a non-permanent, often modular or portable structure designed to provide weather protection, containment, or safety during construction, renovation, emergency repairs, or event staging. These systems are engineered for quick installation and removal, typically utilizing materials such as reinforced PVC or polyethylene fabrics, aluminum or steel frames, and tensioning components to create durable yet temporary coverings that shield work areas from rain, wind, debris, and other environmental factors while allowing natural light transmission and ventilation as needed.
