### Report Overview:

A temporary tattoo is a decorative image that can be applied to the skin for short periods of time. Most temporary tattoos are novelty items made with a special type of decal. A process known as screen printing is used to create the tattoo image on paper coated with a transfer film. The transfer film allows the image to "slide" off the backing paper and onto the skin when moisture is applied. After drying, the film holds the image on the skin through several washings.

The Global Temporary Tattoo Market Size was estimated at USD 1035.95 million in 2023 and is projected to reach USD 1581.01 million by 2029, exhibiting a CAGR of 7.30% during the forecast period.
