## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Tenapanol Tablets competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Tenapanol is an oral small-molecule drug that inhibits the intestinal sodium/hydrogen exchanger NHE3, reducing sodium absorption in the gut, thereby alleviating symptoms of irritable bowel syndrome with constipation (IBS-C) and treating hyperphosphatemia in patients with chronic kidney disease. In terms of formulation, Tenapanol's active pharmaceutical ingredient (API) is combined with excipients such as microcrystalline cellulose and hydroxypropyl methylcellulose to produce tablets, ensuring stability, solubility, and oral bioavailability. Its manufacturing process spans the full supply chain, from upstream API synthesis to downstream tablet compression and coating, enabling controlled release and patient-friendly oral administration. In 2024, the global sales volume of Tenapanol tablets reached 236,000 bottles, with an average price of \$1,290 per bottle.

The global Tenapanol Tablets market size was estimated at USD 305.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.10% during the forecast period.
