## Abstracts

Under the action of wind, waves and current a TLP moves like an "inverted pendulum" with negligible heave, pitch and roll motions and maintains a near constant distance between the platform and seabed. For this reason, TLPs can be used to drill and/or produce Oil and gas wells using dry trees with top tension risers or produce satellite wells via wet trees and Steel Catenary Risers (SCRs) for a variety of water depths, sea conditions and payloads. A TLP is a very versatile facility in a field development plan. It can be used as a standalone production facility with or without drilling/workover and in areas of the world lacking a pipeline infrastructure it can be deployed as a wellhead platform connected to an FPSO.

The global Tension Leg Platform (TLP) market size was estimated at USD 362.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
