## Abstracts

Tension sensing idler rolls are specialized components used in industrial web-handling applications, such as paper manufacturing, printing, converting, and packaging, where they serve a dual function: supporting moving webs (e.g., paper, film, foil, or textiles) while simultaneously measuring the tension exerted on the material. These rolls integrate strain gauges or other force-sensing technologies into their structure to provide real-time, accurate tension data, enabling precise control over web tension to prevent defects like wrinkling, stretching, or breaking, thereby optimizing production efficiency, material yield, and product quality in continuous processing systems.

The global Tension Sensing Idler Rolls market size was estimated at USD 280.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.85% during the forecast period.
