Abstracts

The stenter shrinking machine is a kind of equipment used for textile finishing. It mainly pre-treats the fabric by stretching and heating to achieve the dimensional stability and shaping effect of the fabric. Its working principle is to moderately stretch the fabric in the longitudinal or transverse direction under the conditions of controlled temperature, humidity and tension, so as to reduce the subsequent shrinkage of the fabric and improve the flatness and feel of the fabric. The stenter shrinking machine is widely used in the pre-treatment of fabrics such as wool, cashmere, and cotton fabrics, especially in the clothing, home textile and other industries, playing an important role in improving the quality and stability of fabrics.

The global Tenter Shrinking Machine market size was estimated at USD 350.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.80% during the forecast period.
