Report Overview

Terahertz Body Scanning Systems and techniques have been developed recently and are widely used owing to the advantages of low radiation and clothing-penetrable for detecting concealed weapons or other contraband at airports, customs, retail, and other secure locations. If mounted in a proper enclosure, the body scanner allows the operator to screen people with no knowledge of stealth. This ensures that various person-borne threats are detected effectively without creating chaos. Besides, the sufficient imaging distance of up to 3 m ensures remote detection of suspicious objects hidden beneath clothes. The mere presence of such hidden items can help law enforcement and security personnel mark a suspect and isolate him/her from police/security/customs officers for subsequent physical inspection (body search), depending on the scene.
