Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Terahertz Imaging Detection competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The 'terahertz gap'—where until recently bright sources of light and sensitive means of detection did not exist—encompasses frequencies invisible to the naked eye in the electromagnetic spectrum, lying between microwave and infrared in the range from 0.3 to 3THz. Terahertz radiation, also known as t-rays, has wavelength of 3-100 cm⁻¹. Terahertz imaging is an emerging and significant nondestructive evaluation (NDE) technique used for dielectric (nonconducting, i.e., an insulator) materials analysis and quality control in the pharmaceutical, Biomedical, security, materials characterization, and aerospace industries. It has proved to be effective in the inspection of layers in paints and coatings, detecting structural defects in ceramic and composite materials and imaging the physical structure of paintings and manuscripts. The use of THz waves for non-destructive evaluation enables inspection of multi-layered structures and can identify abnormalities from foreign material inclusions, disbond and delamination, mechanical impact damage, heat damage, and water or hydraulic fluid ingress. This new method can play a significant role in a number of industries for materials characterization applications where precision thickness mapping (to assure product dimensional tolerances within product and from product-to-product) and density mapping (to assure product quality within product and from product-to-product) are required. In 2024, global Terahertz Imaging Detection volume reached approximately 2,431 units, with an average global market price of around 211.3 K US\$ per unit.

The global Terahertz Imaging Detection market size was estimated at USD 421.0

million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 17.60% during the forecast period.
