Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Terpinen-4-ol competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Terpinen-4-ol is a terpene alcohol isolated and refined from natural essential oils. It is a colorless and slightly viscous liquid. It has a pleasant nutmeg smell and is widely used in the preparation of daily and edible flavors. In addition, terpinen-4-ol also has strong bactericidal, disinfectant and preservative effects, and can be used as a bactericidal disinfectant and external medicine. Terpinen-4-ol is mainly derived from natural plants, especially essential oils from pine and other coniferous trees. Its extraction usually involves steam distillation or solvent extraction. The advancement of modern extraction technology has effectively improved the extraction efficiency and purity of terpinen-4-ol. In the upstream market, there are multiple suppliers of natural fragrances and essential oils, and the competition is fierce. Enterprises need to improve their market competitiveness through technological innovation and cost control. As consumers' preference for natural ingredients increases, the demand for terpinen-4-ol in the fragrance and cosmetics industry is expected to continue to grow. With the development of extraction and synthesis technology, the cost of extracting terpinen-4-ol is gradually reduced, which will help expand its market application. The market for natural fragrances is expanding, and terpinen-4-ol, as a natural ingredient, is favored by more and more brands.

The global Terpinen-4-ol market size was estimated at USD 135.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
