## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Tert-Butyl Hydroperoxide (TBHP) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Tert-butyl hydroperoxide (TBHP) is an organic peroxide with the chemical formula  $(CH_3)_3COOH$ . It appears as a colorless to pale yellow, oily liquid and functions as a versatile oxidizing and radical-initiating reagent in both laboratory and industrial processes. In organic synthesis, t-BuOOH is widely used for epoxidations, hydroxylations, and Baeyer-Villiger oxidations, offering milder conditions and greater selectivity compared to stronger peracids. It also serves as an initiator in polymerization reactions—particularly for producing polymers and resins—owing to its ability to generate oxygen-centered radicals upon thermal or catalytic decomposition. While effective and relatively easy to handle, t-BuOOH must be stored and used with caution, as it can decompose exothermically if exposed to heat, light, or incompatible materials. The global production of tert-butyl hydroperoxide (TBHP) exceeded 110,000 tons in 2025, with an average factory price close to USD 2,700 per ton and an industry gross profit margin typically ranging from 24% to 28%. Depending on the production process, the capacity of a single production line varies from several thousand to tens of thousands of tons. In terms of the industrial chain, the key raw material for the liquid-phase oxidation process using isobutane is isobutane itself. Representative upstream suppliers are generally integrated refining and cracking enterprises, such as LyondellBasell, ExxonMobil, Sinopec, SIBUR, Lotte, LG Chem/YNCC, etc. For the acid-catalyzed process using tert-butanol and hydrogen peroxide, the key raw material is tert-butanol, with representative upstream suppliers including LyondellBasell, Evonik, Kuraray, Lotte Chemical, Zibo Haizheng, among others. The primary downstream applications are polymerization initiators and cross-linking agents, with major end-users such as BASF,

Dow, Wacker, Chemie, Synthomer, Allnex, etc. The global tert-butyl hydroperoxide (TBHP) market is driven primarily by its extensive use as a polymerization initiator and oxidizing agent in chemical synthesis, coatings, and resin production. Ongoing expansion in the plastics, adhesives, and pharmaceutical sectors alongside rising demand for eco-friendly and high-performance processes continues to fuel market growth. Europe and North America have long been the technological and regulatory highlands for organic peroxides, with stringent regulations and high transportation thresholds, making regional production and short-distance delivery the mainstream. In addition to polymerization initiation and cross-linking, local demand is also driven by epoxidation and mild oxidation applications. In Japan and South Korea, the demand structure leans more toward high-specification, refined, and electronic material chains, with particular sensitivity to metal ions and by-product control. There is a preference for using ~80% low-water or organic-phase specifications to match anhydrous systems. China is one of the fastest-growing single markets. On one hand, its vast domestic polymer, adhesive, and rubber/plastic modification industries drive demand for general-grade TBHP. On the other hand, the deployment of large-scale olefin and oxidation facilities promotes the localization of oxidation/epoxidation demand, while tightening regulations are driving production capacity to concentrate in compliant industrial parks and enterprises with intrinsic safety design capabilities. In regions such as India, Southeast Asia, and the Middle East, demand growth is linked to the migration of downstream manufacturing. These markets are increasingly transitioning toward import substitution and local blending/formulation. Overall, TBHP is significantly influenced by its hazardous chemical properties and the United Nations Dangerous Goods Classification. International long-distance transportation is subject to temperature limits, quantity restrictions, and specialized packaging requirements. Consequently, proximity-based supply and regional compliance chains serve as natural entry barriers for the industry.

The global Tert-Butyl Hydroperoxide (TBHP) market size was estimated at USD 284.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
