Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Tertiary Amine Catalyst competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Tertiary amine catalysts are the most widely used catalysts for the preparation of polyurethane foams, especially in polyurethane soft, hard and sprayed foams. The catalytic activity depends on its structure and alkalinity. The choice of tertiary amine will affect foam performance such as physical performance parameters, rebound rate, open/close cell, surface curing, etc. Their main function is to promote the reaction between isocyanate (NCO) and water or polyols, thereby controlling the foaming rate and gelling process. Polyurethane foam is one of the largest consumer markets for closed tertiary amine catalysts. Since this material is widely used in furniture, automotive interiors, insulation materials and other fields, higher requirements are put forward for the safety and controllability of the catalyst. The sealed catalyst can effectively control the foaming speed and cell structure, improve the quality of the finished product while reducing VOC emissions. In aqueous coatings and adhesives, sealing catalysts can avoid excessively early rise in viscosity or gelation caused by the premature release of the catalyst, extend storage stability, and improve construction performance. Some high-end electronic packaging materials have extremely high requirements for the curing process. Enclosed tertiary amine catalysts can release active substances after heating, achieving the dual goals of low-temperature molding and high-temperature curing. In drug intermediate synthesis, blocking catalysts can increase reaction selectivity and yield by regulating the release time and reduce by-product generation.

The global Tertiary Amine Catalyst market size was estimated at USD 580.0 million in

2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
