Abstracts

Test automation platforms are software solutions designed to automate the execution of pre-scripted tests on software applications, enabling continuous testing throughout the development lifecycle by integrating with CI/CD pipelines, managing test data, generating reports, and reducing manual effort. The global market for these platforms is expanding rapidly, driven by the widespread adoption of Agile and DevOps methodologies, the demand for faster software releases, and the growing complexity of applications across web, mobile, and API environments. Key market drivers include the need for improved software quality, cost reduction in manual testing, and scalability across diverse technology stacks, while challenges involve integration with legacy systems, high initial setup costs, and a shortage of skilled automation engineers. Leading vendors offer cloud-based, AI-enhanced solutions that support codeless automation, cross-browser testing, and real-time analytics, catering to industries such as IT, finance, healthcare, and e-commerce where rapid, reliable software deployment is critical.
