Abstracts

Tethered power for drones refers to a system where a drone is connected to a power source via a cable or tether, rather than relying on a traditional battery for power. This allows the drone to stay in the air for extended periods of time, as it can continuously draw power from the source while in flight. Tethered power systems are often used for applications that require long-duration flights, such as surveillance, monitoring, and aerial photography. The Tethered Power for Drone market is experiencing significant growth, with major sales regions including North America, Europe, and Asia Pacific. The market is characterized by a high level of concentration. The increasing demand for long-duration surveillance and monitoring applications in sectors such as defense, public safety, and infrastructure is driving the market growth.
