Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Tetrahydropalmatine Hydrochloride competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Corydaline is an alkaloid extracted from the traditional Chinese medicine *Corydalis yanhusuo*. It possesses various pharmacological activities, including analgesia, sedation, anti-inflammation, and antidepressant effects. It is widely used in the pharmaceutical, traditional Chinese medicine, and health product industries, commonly treating pain, depression, and insomnia. It is also a hot topic in neuroscience and pharmacology research. The *Corydalis yanhusuo* industry chain can be summarized as a complete chain, from upstream raw material supply and chemical extraction or synthesis, to midstream traditional Chinese medicine preparation production, and finally to downstream clinical application and sales. The upstream mainly includes the supply of natural Chinese medicinal material *Corydalis yanhusuo* (through cultivation or procurement of dried tubers) and excipients; the midstream involves traditional Chinese medicine companies or pharmaceutical chemical companies obtaining *Corydalis yanhusuo* raw materials through extraction, separation, purification, or semi-synthetic processes, and further processing them into tablets, capsules, injections, and other preparations; the downstream mainly consists of hospitals, pharmacies, health product companies, and patients, applying it in the treatment of pain, inflammation, and antiplatelet therapy, while simultaneously forming supporting quality control, clinical guidance, and policy supervision links. The overall industry chain is characterized by its reliance on natural plant-based raw materials, complex production processes, and downstream markets significantly influenced by clinical demand and policy. In 2024, global production of corydaline reached 2,272 tons, with an average selling price of US\$55 per kilogram. The gross profit margin was

approximately 32%, and the capacity utilization rate was around 70%. Corydaline is an active alkaloid extracted from the traditional Chinese medicine *Corydalis* rhizome. It possesses excellent analgesic, anti-inflammatory, and antiplatelet effects, and has application value in both traditional Chinese medicine and modern drug development. Its advantages lie in its natural source, relatively high safety profile, and applicability in various formulations (tablets, capsules, injections, etc.). However, due to the influence of planting conditions on raw materials, the complexity of the extraction process, and high costs, its industrialization and large-scale promotion face certain challenges. Furthermore, the downstream market is constrained by clinical needs and policy regulations. Therefore, the overall industry development needs to balance technological innovation with quality standardization.

The global Tetrahydropalmatine Hydrochloride market size was estimated at USD 125.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
