Report Overview

Text editor software is used by programmers and developers for manipulating plain text source code, editing configuration files or documentation, or viewing error logs. Text editors are scaled-down from the full functionality of an integrated development environment (IDE), but may have plugins that blur the lines between the two. Text editors are ideally fast and lightweight for editing and manipulating a small number of text files at a time, and they provide features like regular expression search and replace, syntax highlighting, autocompletion, and multiple tabs or window panes. Developers who do not work in a system where a full-fledged IDE is needed, or where an IDE is too restricting, will often find that a text editor gives them more flexibility and freedom to code outside of standardized methods of development. Beginning developers can turn leverage free text editor tools to meet their needs. Text editors often integrate with source code management software and build automation software tools through plugins.
