Report Overview

Textile puffing deformers are a kind of equipment specially used for puffing and deforming fibers or yarns. This equipment applies a certain physical force (such as stretching, compression, torsion, etc.) to the input fibers or yarns through a specific mechanical structure and working principle, so that they undergo morphological changes, thereby obtaining output products with characteristics such as fluffy, soft, and good elasticity. With the development of the textile industry and technological progress, textile puffing deformers are also constantly updated. Modern puffing deformers use more advanced control systems and automation technologies to improve production efficiency and product quality.
