### Report Overview

Textile chemicals are class of specialty chemicals and comprise chemicals and intermediates that are used in various stages of textile processing such as preparation, dyeing, printing and finishing. These are often used to enhance or impart desired properties and color to the fabrics during the manufacturing process. Mainly refers to dyes and textile auxiliaries, textile chemicals is crucial to the upgrade and value improvement of textiles. Textile chemicals not only make textile products more functional and more contemporary, but also reform the dyeing and finishing process, so that the textiles product become more and more gentrification and green. Textile chemical products range from highly specialized chemicals (biocides, flame retardants, water repellents, and warp sizes, for example) to relatively simple commodity chemicals (such as bleaches) or mixtures thereof (such as emulsified oils and greases, starch, sulfonated oils, waxes, and some surfactants). Several thousand textile chemical specialties are sold, many of them quite similar and differing from one supplier to another merely in trade names and prices. Because of the nature of the chemicals involved, assessment of market sizes is very difficult and, at best, gives estimates based on published statistics on fibers and textile production and typical application levels required for specific process steps.
