Abstracts

Textile design software is a CAD/CAM software in the market with interactive tools. It can involve a designer in many different activities, from deciding what to design, through controlling the production of sample ranges and establishing production specifications to controlling design storage systems. As manufacturers increasingly practice zero-waste design, the demand for 3D fashion design software continues to increase. The software helps designers reduce or eliminate fabric waste. Almost 15% of fabric is wasted when making clothing, but this zero-waste design approach eliminates textile waste during the design phase. Therefore, using 3D fashion design software can help textile manufacturers eliminate waste when designing garments. 3D fashion design software can instantly interpret how the cloth will look on the human body, and designers can also test with different fabrics or combinations of fabrics to get the desired results, which will increase the use of this software by fashion companies.

The global Textile Design Software market size was estimated at USD 1975.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.90% during the forecast period.
