Report Overview

Textile recycling services involve the collection, sorting, and processing of used textiles to create new products or materials. These services aim to reduce waste, conserve resources, and minimize the environmental impact of textile production and disposal. Textile recycling can include various items such as clothing, linens, and fabrics, which are sorted based on their condition and material composition. The textiles are then processed through methods like shredding, tearing, or melting to create new fibers or materials for reuse in the textile industry.
