## Abstracts

A textile softening agent, also known as a fabric softener, is a chemical substance used in the textile industry to improve the softness, feel, and overall comfort of fabrics. It is typically applied during the textile finishing process, after the fabric has been woven or knitted. Textile softening agents are designed to modify the surface properties of fibers, making them smoother, more flexible, and less stiff. This helps to reduce friction between fibers, leading to improved fabric drape, reduced creasing, and increased comfort against the skin. The global textile softening agent market refers to the overall market for chemicals and products used to soften textiles. It includes various types of softening agents, such as cationic softeners, silicone-based softeners, and fatty acid-based softeners, among others. The size and growth of the global textile softening agent market can be influenced by factors such as the demand for soft, comfortable textiles, advancements in textile manufacturing processes, and changing consumer preferences. Market trends, including the increasing popularity of eco-friendly and sustainable softening agents, also impact the market.
