Abstracts

Textured polyester yarn refers to a type of synthetic yarn made from polyester fibers that have been mechanically or chemically modified to introduce crimps, loops, or other irregularities along their length, enhancing properties such as elasticity, bulkiness, volume, and texture compared to flat or untextured polyester yarns. This process, which may include techniques like false-twist texturing, air-jet texturing, or gear crimping, results in a yarn that is versatile and widely used across multiple textile applications, including apparel (such as sportswear, outerwear, and hosiery), home textiles (like upholstery and carpets), and industrial fabrics due to its durability, resilience, cost-effectiveness, and ability to mimic the aesthetic and tactile qualities of natural fibers.

The global Textured Polyester Yarn market size was estimated at USD 1200.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
