Report Overview

Texturing and cleaning directly determines the characteristics of HJT batteries. Texturing and cleaning is the first step in HJT battery production. Texturing and cleaning uses KOH etching solution to perform various anisotropic corrosion on the silicon wafer, that is, forming a texture on the surface of the silicon wafer, which can reduce the surface reflectivity of the silicon wafer to less than 12.5%, thereby generating more photogenerated carriers. Since HJT is a low-temperature process and impurities cannot be removed through high-temperature processes, cleaning and texturing preparation is critical.
