Report Overview

TFT quartz powder is a key raw material used to manufacture TFT-LCD (Thin Film Transistor Liquid Crystal Display) glass substrates. In the production process of TFT-LCD, quartz powder is one of the main ingredients for making glass substrates. It is usually purified and processed from high-purity natural quartz sand. Quartz powder plays a vital role in the manufacture of glass substrates because it can reduce the thermal expansion coefficient of glass and improve the thermal stability, chemical stability, hardness and ultraviolet light transmittance of glass. TFT-LCD glass substrate is the core component of the liquid crystal display panel. Its quality directly affects the performance indicators such as resolution, light transmittance, thickness, weight and viewing angle of the display screen. Therefore, high-quality TFT quartz powder is very important for producing high-performance displays.
